Hitch Classifications

Four basic classifications are given to conventional drop bar style hitches!

Hitches are rated for Gross Trailer Weight (GTW) and tongue weight (TW). Tongue weight is usually 10 to 15 percent of trailer weight. Before choosing a hitch, you need to know the total load weight of your trailer being towed. The following classification will help you determine the right hitch for you.

Class I: Pulls up to 2000 lbs. GVWR with 200 lbs. (TW).

Class II: Pulls up to 3,500 lbs. GVWR, with 350 lbs. TW.

Class III: Pulls up to 5,000 lbs. GVWR, with 500 lbs. TW.

Class IV: Pulls up to 10,000 lbs. GVWR and even more if rated such. TW is 1,000 and up.

Class V: Indicates a heavy-duty frame-mounted hitch designed for towing over 10,00 lbs.

When nothing but the best will do!

Why an aluminum hitch instead of steel? These are the facts:

1. The hitch products we sell are constructed of an aircraft aluminum alloy (6061-T), which is the same alloy used to manufacture aircraft and NASCAR racing frames, and has proven itself over many years that this aluminum alloy will withstand the brutal forces race cars and airplanes of all shapes and sizes endure on a daily basis. What's more, these are unquestionably the lightest weight hitches on the market.
2. This type of aluminum alloy has a much greater tensile strength than steel. This means the consumer has greater strength and towing power with this type of hitch verses those constructed of steel. Pound for pound, it can actually carry a heavier load (30% stronger than steel) before it reaches its maximum load limits. Each aluminum drop bar hitch (**Alumistinger**) has a Gross Trailer Weight Rating (GTWR) of 13,000 lbs, with a Tongue Weight (TW) of 2,000 lbs. Hitches made by other manufactures, such as Reese, Draw Tight, Hidden Hitch, Putnam, Acme, Quick Draw, or Wing Enterprises are fast becoming outdated because of their steel designs. Our hitch products are constructed with up-to-date alloys and technology that gives our customers a better and more dependable product.
3. The other major advantage is the fact that these aluminum hitch products will never RUST!!! While Reese hitches and the others start rusting and looking shabby in just a short period of time (because the paint or chrome begins to flake or chip off), our aluminum hitches will keep on looking polished, shiny, and new for years to come. Yes, our aluminum hitches appear to be chrome plated, but THEY ARE NOT! Our **Alumistinger** and **Rapid Hitch** have a POLISHED finish, no chrome or paint that can flake and chip off. As a complement to our non-rusting hitches, we also offer Curt Manufacturing's stainless steel balls that will never rust. So the complete hitch system, from the drop bar to ball, will shine for years to come and never rust. It is the ultimate hitching system!

We sell hitches and other towing accessories designed for trucks and SUVs. They are manufactured by Ultra Hitch or ultrahitch.com at Andersen Manufacturing, and Curt Manufacturing—all made in the good O' USA .

Our aftermarket towing accessories range in products designed for fifth wheel trailers and sport utility trailers; including, ball mounts, balls and hitch adapters. We sell some of the best products in the industry and this is why so many consumers, like yourself, buy from us to satisfy their towing needs. We invite you to take a look at our hitch products and order online. We insure fast convenient service with free shipping to destinations within the continental US.

The best is here waiting for you!
