

Representative Projects: Kohls Denim Display Fixtures(2007)
(Manufactured under contract with Amstore, Coopersville, Mi)

Amstore was contracted by Kohls to manufacture a large number of the fixtures in two different sizes for displaying blue jeans. The number of fixtures was so large that Amstore out-sourced the manufacture of **900** of these units to Bourne Industries. All 900 units were built and shipped in June and July of 2007.

The unit to the left, shown in the Bourne Industries plant prior to packaging and shipment, is 56" high, 29" deep and 46" wide. It has eight heavy duty casters on the bottom so that the unit can be moved easily in the store. All components are made with particleboard overlaid with thermofused melamine surfaces. All edge treatments are made of PVC.

The unit is constructed with dowels and was assembled and pressed together with case clamps at Bourne Industries.

The picture to the right shows the large floor standing unit, with a smaller unit on top, in a Kohls store. Bourne Industries manufactured both large and small units. The smaller unit can be taken off, if required by space limitations in the store.
